# Windows Status in CLRC

Gareth Smith

---

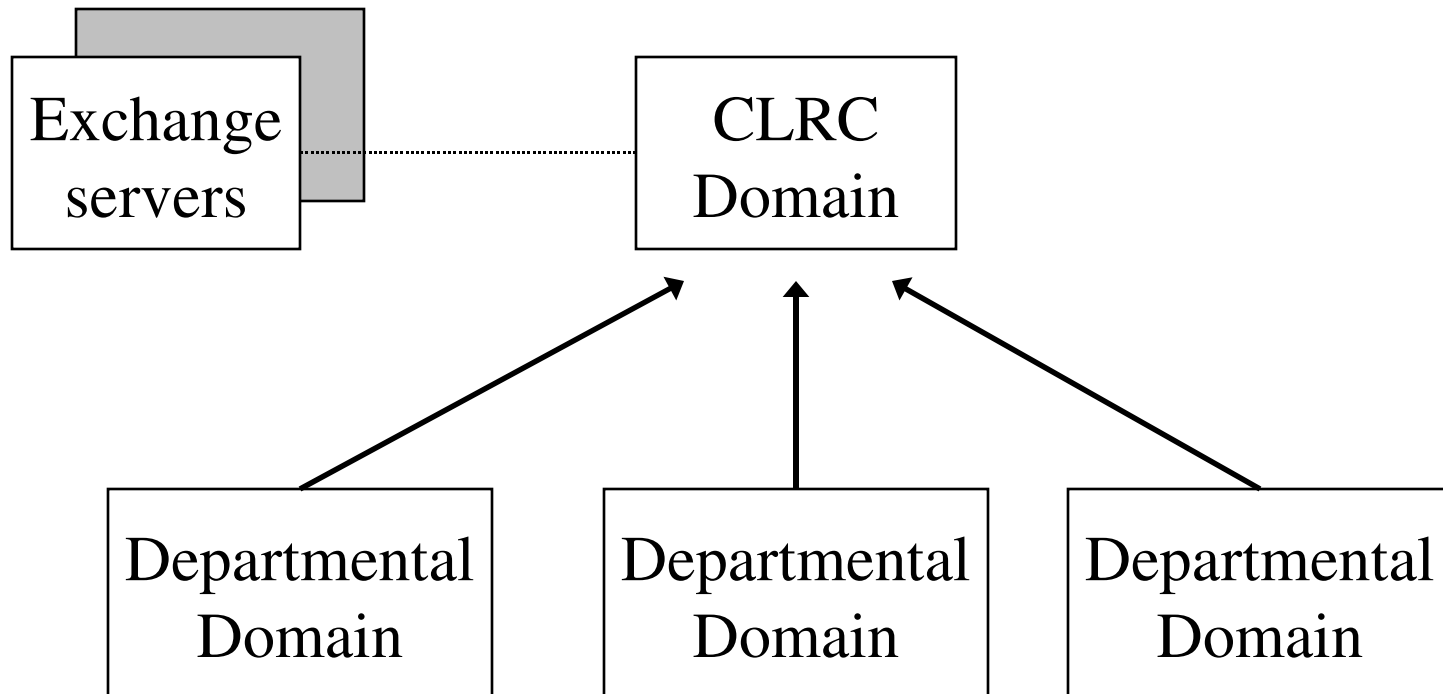

# Status

- Domain infrastructure NT
- Many Servers moved to Windows 2000
  - File server, Print Server, Web Server
- Desktops moving to Windows 2000
- Laptops – almost all Windows 2000
  
- *But without AD – cannot make use of Windows 2000 features such as group policies etc.*

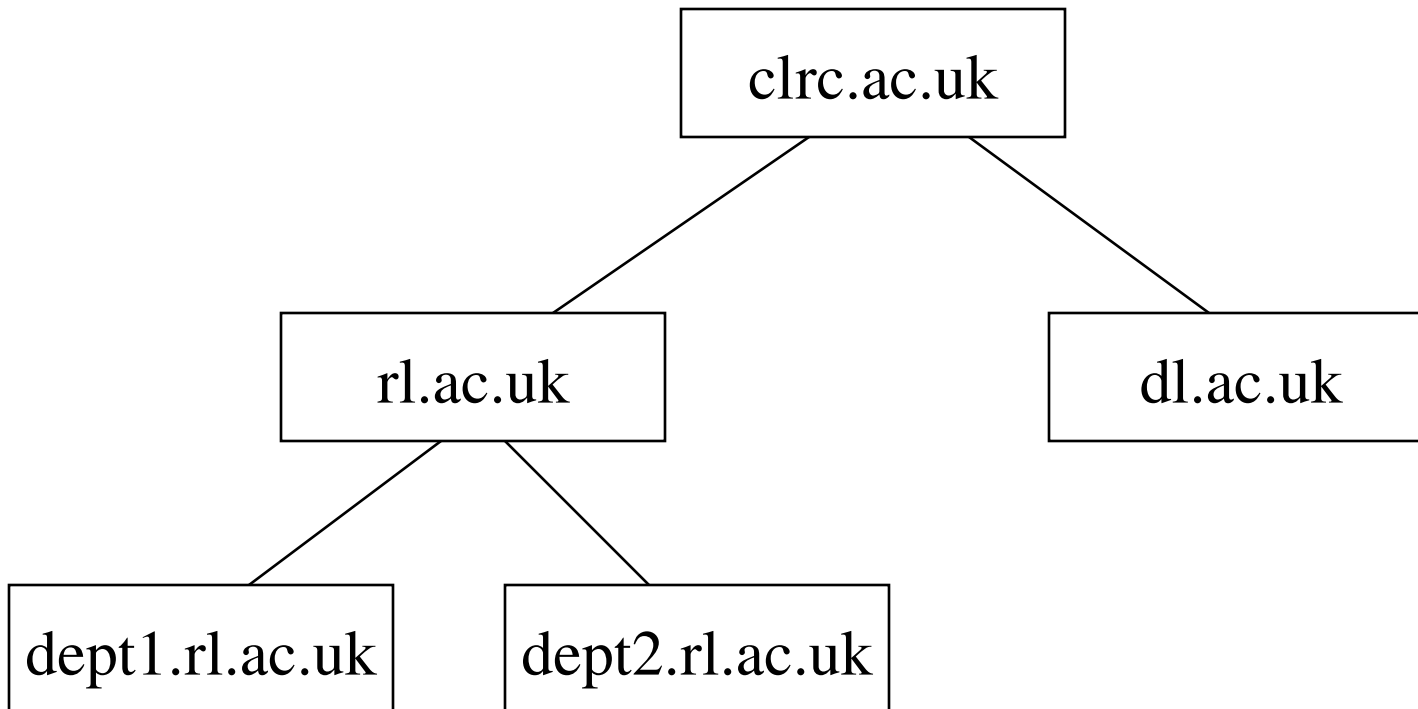

# Single Master NT Domain Model

# Possible Windows 2000 organisation

---

# Concerns / Comforts

- Many other organisations still run NT.
- Exchange 5.5 runs fine now...
  - But at some point may need an anti-virus update or security update that is not available for Exchange 5.5.
- Risk of some departments 'going it alone'.
- Priority of Windows 2000 migration being raised.
  - No decisions yet on final domain structure (tree, forest) or how to get there (migrate existing structure or build afresh).
